

Product Designer | Design Systems & Product

Senior Product Designer with 5+ years designing and shipping digital products across gaming, SaaS and web platforms. Specialising in design systems, interaction design, responsive architecture and modern frontend workflows.

M&J Productions

Jul 2023 - Present

Product Designer | Gold Coast, Australia

I lead product design across gaming and gambling platforms, shaping products from early concepts through to production. My work spans interaction design, design systems, responsive architecture and modern frontend implementation, with a strong focus on scalable user experiences.

- Led the design and delivery of complex gaming products across web and mobile, taking projects from discovery through to production.
- Created scalable design systems, component libraries and reusable product foundations that accelerated development and improved consistency across the platform.
- Designed responsive application architecture, navigation systems and interaction patterns that supported multiple products and game experiences.
- Built production-ready interfaces using modern frontend workflows, working across Figma, React, Cursor and developer tooling to reduce the gap between design and implementation.
- Partnered directly with engineers and stakeholders to solve complex product problems, balancing user experience, technical constraints and delivery speed.
- Owned end-to-end product experiences including game design, sportsbook interfaces, account management, wallets, deposits and responsive platform foundations.

Skills

- Product design
- UX Architecture
- Interaction Design
- Design Systems
- Prototyping

Frontend

- React
- Next.js
- Tailwind

Tools

- Figma
- VS Code
- Vercel
- Git
- Cursor

Non Fungible Labs

Jun 2022 - Jul 2023

Product Designer | Auckland, New Zealand

- Designed end-to-end UX flows and product experiences across Web3, gaming and digital ownership products, from early concepts through high-fidelity design and delivery.
- Created and maintained design systems, reusable components and interaction patterns, improving consistency across products and supporting faster design and development.
- Designed complex crypto payment, wallet and transaction flows, simplifying blockchain interactions into clear and accessible user experiences.
- Worked through crypto compliance and onboarding requirements, translating technical and regulatory constraints into intuitive user journeys.

Skills

- Product design
- UX Architecture
- Interaction Design
- Design Systems
- Prototyping

Frontend

- React
- Next.js
- Tailwind

Foundation Digital

Jun 2021 - Jun 2022

UX/UI Designer | Auckland, New Zealand

- Designed and shipped responsive websites and digital experiences for clients across a range of industries, working from initial concepts and wireframes through to polished UI and launch.
- Created user flows, wireframes, prototypes and high-fidelity interfaces, building a strong foundation in UX, visual design and responsive web design.
- Worked closely with developers to translate designs into production, gaining hands-on experience with HTML, CSS and frontend implementation.
- Built reusable components and UI patterns to maintain consistency across responsive layouts and streamline design-to-development handoff.

Tools

- Figma
- VS Code
- Vercel
- Git
- Cursor
